Professional Profile

Accomplished data science, technology and business intelligence leader with extensive experience in driving the adoption of advanced analytics, AI, and modern data practices within large international organisations. Proven ability to align data initiatives with strategic business goals, deliver measurable financial value, and lead high-performing, multidisciplinary teams through transformation and growth. Expertise spans the full spectrum of data and analytics—from developing innovative AI applications, optimising operational efficiency, and automating business processes, to delivering actionable insights and supporting major system migrations. Recognised for fostering an innovation-led culture, achieving significant resource efficiencies, and enhancing stakeholder engagement and satisfaction. Strong communicator, adept at influencing at all levels, with a consistent record of delivering against ambitious objectives and achieving recognition for outstanding performance.

Professional Experience

Senior Manager Data Scientist, D3, Allstate (Mar 2022 – Present)

Driving the strategic integration of advanced AI and data science within Allstate's global operations, partnering with senior business leaders to unlock and deliver measurable financial value through innovative analytics solutions. Accountable for aligning data science initiatives to enterprise objectives via annual planning, feasibility assessments, and business case development, ensuring analytical capabilities are embedded in the organisation's strategic roadmap.

Leading and developing multidisciplinary teams—including data scientists, engineers, and analytics consultants—to deliver end-to-end data-science solutions from model design and training through to deployment and operationalisation. Championing Agile methodologies with rapid iteration cycles, stakeholder engagement, and delivery of high-impact Minimum Viable Products, ensuring continuous refinement and alignment to evolving business needs.

Proven expertise in developing and deploying a spectrum of AI applications—including traditional machine learning, computer vision, and large language models (LLM/GenAI)—across both on-premises and cloud environments (AWS, Azure). Key achievements include:

- Designing and implementing ML-driven fraud detection systems for auto claims, aimed at reducing loss ratios.
- Developing predictive analytics to optimise subrogation collection, enhancing recovery rates, reducing liability rates, and driving increased operational efficiency.

- Building computer vision models to extract actionable insights from accident scene imagery (e.g., licence plates, vehicle damage, first responders), automating CRM data capture and supporting downstream analytics models.
- Launching an LLM-powered real-time assistant to support claims adjusters, enhancing critical thinking and maximising the quality of information captured during customer interactions.

Recognised for fostering a high-performance, innovation-led culture and for advancing the practical adoption of AI at scale to drive business transformation.

Senior Manager, GBS Business Intelligence, BT (April 2019 – Feb 2022)

- Head of Business Intelligence function within BT's Group Business Services (Shared Services) division.
- Leading a team of 80 technical staff, across multiple geographies (predominantly UK and India).
- Providing internal support services to BT's Customer Facing Units (CFUs) and to GBS itself – ranging from basic Management Information delivery to development of business intelligence software solutions (Qlik-Sense & Tableau).
- Accountable for transforming and modernising the operation from the traditional low cost offshore model to a best in class shared services business intelligence offering.
- Working towards a fully democratised model, where operational experts can self-serve and derive new business insights.
- Set up a Business Intelligence Centre of Excellence, recruiting some of the best young techno-functional talent from the Indian market – currently 20 FTE.
- Incorporated "Qlik Sense" as the data & visualisation software of choice – recruiting and reskilling in order to drive Qlik as the strategic reporting delivery tool across GBS.
- Adopted Agile delivery methodologies to support more effective BI application delivery.
- Developed an executive scorecard containing critical KPI's and SLA's as well as building the infrastructure and technical processes required to deliver it to BT leadership.
- Realised on-target 20% resource efficiencies (10% YoY) through streamlining processes and automation.

Insight Lead, Group Customer Billing, BT (November 2013 – March 2019)

- Principal Consultant grade, reporting into the Billing Transformation function.
- Led the Insight sub-function, with 25 employees; combination of senior managers, managers and technical team members.
- Responsible for delivering reporting solutions, business intelligence solutions and technical software solutions for Group Customer Billing.
- Handling multiple and disparate data sources, utilising various technologies in order to deliver best in class outcomes for internal stakeholders.
- Successfully migrated hardware estate from data centre to new cloud service (18 month project).

- Personally designed and implemented new organisational structure which helped realise vast improvements in efficiencies and quality.
- Personally developed a highly successful workstack & resource management database architecture – subsequently adapted for use across other functions in the group.
- Customer (internal stakeholder) Satisfaction scores up 10 points to 90% during tenure.

Snr Campaign Reporting & Analysis Manager, BT, Consumer NI Marketing (2005 – 2013)

- Technical marketing operations role (Data Scientist)
- Combining business and technical skills to come up with Insights that drove new marketing campaigns across the various channels.
- Key areas of responsibility included driving reductions in customer churn and increasing sales through marketing campaigns.
- Campaign performance measurement and reporting.
- Building and deploying propensity models in a marketing environment
 - Understanding of the main statistical techniques including Decision Trees, Logistic Regression, Clustering
 - Incorporating models into marketing campaigns
 - Measuring model and campaign performance (full tracking of every campaign)
 - Applying model insights to business priorities – usually churn reduction and additional revenues
 - Making strategic recommendations to executive team on how learning can be applied to the business
 - First to deploy statistical models for use in contact strategy in BT Ireland (North & South).
- Development of applications and tools for tactical programmes, automation of data processes and report generation.
- Cradle to the grave involvement in commercial activities, i.e. identifying areas of opportunity, forecasting impact, production of business case, presentation to stake-holders and gaining sign-off, implementing, measuring and improving.

Notable Personal Achievements: 3 x Times CEO Award Winner in Consumer NI, BT Ireland Talent Pipeline Alumni, personally developed all the retention targeting models for the rollout of both BT Infinity and BT Sport in N. Ireland.
